***Reasons for Allowance***

Claims 2, 3, 6-8, 18, 19, 22, 23, 32, 35, 36 & 39-44 are allowed.

Applicant has amended the claims to overcome the previous rejection. All claims that were previously indicated as being allowable if rewritten to include all language of the base claim and intervening claims have been amended as such. All claims that were previously indicated as allowable have been amended are now independent claims containing the allowable subject matter. This amendment was discussed in a telephonic interview that occurred on 18 FEB 2011 in which the current amendments were proposed and the examiner agreed that if the proposed claims were submitted that the application would be put in condition for allowance. As such, the claims have been properly amended and the previous rejection has been overcome. The application is now in condition for allowance.

The following is an examiner's statement of reasons for allowance:

Claim 6 is allowable because the prior art of record does not teach or fairly suggest an apparatus comprising all the features as recited in the claims and in combination with the electrostatic discharge protection circuit is operable to float the low voltage supply and to shunt: the radio frequency input to high voltage supply positive discharge pulse using the second diode and the electrostatic discharge clamp, and the

Art Unit: 2836

radio frequency input to high voltage supply negative discharge pulse using the first diode and the electrostatic discharge clamp.

Claims 2, 3 & 8 are allowable as they depend from claim 6, which is also allowable.

Claim 7 is allowable because the prior art of record does not teach or fairly suggest an apparatus comprising all the features as recited in the claims and in combination with the electrostatic discharge protection circuit is operable to float the high voltage supply and to shunt: the radio frequency input to low voltage supply positive discharge pulse using the second diode, and the radio frequency input to low voltage supply negative discharge pulse using the first diode.

Claims 39-41 are allowable as they depend from claim 7, which is also allowable.

Claim 22 is allowable because the prior art of record does not teach or fairly suggest a low noise amplifier comprising all the features as recited in the claims and in combination with the electrostatic discharge protection circuit is operable to float the low voltage supply and to shunt the input/output pad to high voltage supply positive discharge pulse using the second diode and the electrostatic discharge clamp, and the input/output pad to high voltage supply negative discharge pulse using the first diode and the electrostatic discharge clamp.

Claims 18 & 19 are allowable as they depend from claim 22, which is also allowable.

Claim 23 is allowable because the prior art of record does not teach or fairly suggest a low noise amplifier comprising all the features as recited in the claims and in combination with the electrostatic discharge protection circuit is operable to float the high voltage supply and to shunt: an input/output pad to low voltage supply positive discharge pulse using the second diode, and an input/output pad to low voltage supply negative discharge pulse using the first diode.

Claims 42 & 43 are allowable as they depend from claim 23, which is also allowable.

Claim 35 is allowable because the prior art of record does not teach or fairly suggest a low noise amplifier comprising all the features as recited in the claims and in combination with floating the low voltage supply while shunting an input/output pad to high voltage supply positive discharge pulse using the second direct discharge path and the third discharge path, and shunting an input/output pad to high voltage supply negative discharge pulse using the first direct discharge path and the direct discharge path.

Claim 32 is allowable as it depends from claim 35, which is also allowable.

Claim 36 is allowable because the prior art of record does not teach or fairly suggest a low noise amplifier comprising all the features as recited in the claims and in combination with floating the high voltage supply while shunting an input/output pad to low voltage supply positive discharge pulse using the second direct discharge path, and shunting an input/output pad to low voltage supply negative discharge pulse using the first direct discharge path.

Claim 44 is allowable as it depends from claim 36, which is also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SCOTT BAUER whose telephone number is 571-272-5986. The examiner can normally be reached on Tuesday-Saturday 10am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jared Fureman can be reached on 571-272-2391. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
